The world's most accessible, efficient and intuitive self-service bag drop brought to you by Glidepath and Innovative Travel Solutions.

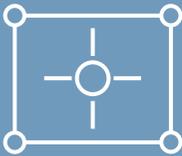

Performance

01

High accuracy
and efficiency

02

Average processing time
under 10 seconds with
no agent intervention
or assistance required

03

Uses innovative camera technology for superior read-rates and efficiency

04

Fully CUSS compliant for single airline or common use applications

Design

01

Accessible for all and Intuitive

02

An automated self-service bag drop that is accessible to all travellers regardless of age and mobility

03

Glidepath and YVR applied ergonomic design principles to provide passengers ease of use by lowering the profile of the conveyor to 4 inches (100mm) off the floor and creating durable ramps to wheel bags onto the conveyor

04

Designed for the airport of the future, with a modern and sleek aesthetic including clean lines and open access from multiple sides

05

Available in single or double units

About YVR /ITS

Innovative Travel Solutions (ITS) is the innovation team at Vancouver International Airport (YVR), voted **North America's Best Airport** for **9** straight years by Skytrax World Airport Awards.

In 2009, the innovation team implemented BORDERXPRESS™ at Vancouver International Airport and soon discovered that other airports and governments might also want the ability to reduce wait times and increase their international arrivals traffic without having to add additional space or staffing resources. YVR has now sold over 1,600 kiosks to 43 airport and seaport locations worldwide processing more than 181 million passengers – more than any other automated passport control provider.

With more than 10 years of experience in kiosk design, user experience, layout and flow analysis, the Innovative Travel Solutions Team has set their sights on the next innovation in the evolution of the passenger experience. YVR's Innovative Travel Solutions team is proud to bring their innate understanding of airports to this collaboration with Glidepath on CHECKITXPRESS™, the next innovation to improve the passenger experience for airports around the world.

About Glidepath

With over 45 years' industry experience and 900+ projects completed in over 65 countries, Glidepath has become a leading expert in the challenging nature of operational baggage handling systems.

Glidepath design and manufacture a complete range of baggage handling and sorting systems for airports of every size, from small regional centres to large international hubs but our real skill lies in the ability to integrate extensions and enhancements to baggage handling systems without compromising the operations of the airport.

A “value engineered” approach has led to the development of flexible modular designs that can be customised to suit current and future needs and Glidepath’s sophisticated control technology allows automation to any degree.
